Directory of the Renewable Energy Finance and Investment Network (REFIN)

Welcome to the Directory of the Renewable Energy Finance and Investment Network (REFIN), a program of the American Council On Renewable Energy (ACORE), supported by the Renewable Energy and Energy Efficiency Partnership (REEEP).

The REFIN Directory is a listing of organizations that self-nominate as players in financial issues related to, and financing of, renewable energy in North America. It also extends to those who participate in the financing of renewable energy worldwide.

The REFIN Directory provides contact information plus summary comments on the areas of interest and types of financing done by each organization.

For additional information, please contact the listed organization. For more information about ACORE, please see our web site at www.acore.org.

About ACORE

The American Council On Renewable Energy, a 501(c)(3), non-profit organization in Washington, D.C. is focused on accelerating the adoption of renewable energy technologies into the main stream of American society.

Scope:

ACORE promotes all renewable energy options for the production of electricity, hydrogen fuels and end-use energy including:

- Solar Energy
- Wind Power
- Hydropower
- Geothermal Energy
- Ocean Energy
- Biomass Energy and Biofuels
- Waste Energy and Fuels

Membership:

ACORE provides a common platform for the wide range of interests in the renewable energy community including renewable energy industries, associations, utilities, end users, professional service firms, financial institutions, nonprofit groups, universities and other educational organizations, and government agencies. ACORE serves as a forum through which these parties work together on common interests.

Events:

"Renewable Energy in America: Phase II" – Renewables Policy Meeting
Washington D.C., December 6-7, 2004. A high level, two-day annual conference addressing key issues facing the renewable energy industry. Participants include Wall Street leaders, industry and government experts, and renewable energy visionaries.

Power-Gen Renewable Energy - Renewable Energy Trade Show
Las Vegas, NV. March 1-3, 2005. A joint venture with PennWell Communications, this all-renewable energy conference and exhibition will include attendees from equipment suppliers and customers from the utility, transportation and buildings industries. For more information visit: www.power-gengreen.com.

Renewable Energy Finance Forum
New York, NY. June 22-24, 2005. The annual Finance Forum will bring together leaders of the finance industry to discuss a broad range of issues, including: venture capital, debt and equity markets, project finance and public sector finance.

Quarterly Modeling Summits
Washington D.C., Quarterly.

In collaboration with the EPA, DOE and NREL, ACORE co-hosts Quarterly Modeling Summits bringing together analysts on the benefits of renewable energy, forecasting of markets, and national strategies and policies to encourage greater use of renewables.

Programs:

Communications: ACORE publicizes renewable energy solutions to the American public and leadership through strategic communications programs. ACORE plans to establish a Media Center to proactively support journalists and their reporting and to develop outreach programs to the financial community.

Information and Publishing: ACORE will work to create better understanding of renewable energy issues through publishing initiatives, such as a forthcoming book entitled "*Renewable Energy in America*". ACORE also participates in cross-cutting policy analysis that affects all forms of renewable energy.

Member Committees:

Communications Committee: Provides focuses on two key areas: development of a large-scale national and regional media campaign and development of a Renewable Energy Media Center.

Finance Committee: Plans the Annual Finance Forum and maintains relationships with ACORE's network of financial industry leaders.

Economic Research Committee: Organizes and participates in ACORE's Quarterly Summits and conducts research in support of the annual publication, "*Renewable Energy in America*".

International Committee: Works to increase the exchange of information between the US and global renewable energy communities.

Development Committee: fundraises and expands ACORE's membership and funding base.

Contact Information:

American Council On Renewable Energy (ACORE). PO Box 33518 . Washington, D.C. 20033 USA, Telephone: +1.202.429.2030, Fax: +1.202.429.5532 www.acore.org.

About REEEP

The Renewable Energy and Energy Efficiency Partnership (REEEP) is a coalition of progressive governments, businesses and organizations committed to accelerating the development of renewable and energy efficiency systems (REES).

Initiated at the Johannesburg World Summit on Sustainable Development (WSSD) in August 2002 by the UK Government, the REEEP provides an open and flexible framework within which governments work together to meet their own sustainable energy objectives according to their own timetables.

REEEP Vision:

REEEP seeks to accelerate and expand the development of renewable energy and energy efficiency systems in our own economies and in our energy portfolios. Recognizing that these sustainable energy systems can address the key challenges of sustainable development, notably improving energy security, fostering economic development, and greater social equity whilst reducing the environmental impact of energy consumption and production, REEEP is committed to taking joint and collaborative action that will work to promote the development of these technologies and make them affordable energy options for all.

Sustainable Energy Benefits

Energy Security. Dependence on imported fossil fuels leaves many countries vulnerable to disruption in supply and the accompanying economic and development impact. Increased use of efficient and renewables systems improves energy security, by boosting resource productivity, avoiding excessive dependence on imported fuels, developing local sources, and diversifying energy portfolios and suppliers.

Economic Development. Lack of access to sustainable energy constrains opportunities for economic development and improved living conditions. Renewables and energy efficiency systems support a sustained GDP growth by improving economic and environmental performance, enhancing technological innovation and creating new commercial opportunities.

Social Equity. Access to and use of energy is marked by an uneven distribution in many countries, and between rich and poor within them. Developing distributed energy generation and sustainable renewable systems can enable more equitable access to energy services and create new job opportunities, especially in rural areas.

Environmental Protection. Most current energy generation and use results in serious health and environmental impacts at local, regional, and global levels – including climate change – which threatens human well being and ecosystems. Accelerating

energy efficiency improvements and deployment of sustainable renewable energy results in significantly lower environmental pollution.

In November 2003, with assistance from the Austrian Government, we opened our International Secretariat at the Vienna International Centre. The project is supported by a number of governments including: Austria, Ireland, Spain, The Netherlands and the European Commission. On May 26th, the REEEP appointed Marianne Osterkorn as the new International Director.

Contact Information:

REEEP Secretariat, Vienna International Centre Room D1732, Wagramerstrasse 5, A – 1400 Vienna, Austria, Telephone: +43.1.26026.3678, Fax: +43.1.21346.3678

Advance Capital Markets, Inc.

Organization: Advance Capital Markets, Inc. (Advance) is an investment banking firm which specializes in project and corporate finance in the energy and power industries.

Advance is actively involved in financing projects and companies, buying and selling energy assets, properties, and companies. The firm's range of experience covers wind, solar (PV and thermal), biomass, geothermal, hydroelectric, clean fuels, and other forms of alternate energy.

The principals of Advance have a successful track record in starting, funding, and managing a portfolio of successful companies. This experience provides a core competency for advising clients on raising capital and structuring profitable enterprises.

Type of Financing: Project Finance/Debt, Project Finance/Equity, Corporate Financing, Mezzanine Financing, Venture Capital, Private Foundations, Insurance

Sector Served: All types of Renewables

Geographic Focus: US, EU, Middle East

Advent International

Organization: Advent is one of the most experienced energy technology investors in the world. Since 1988, we have backed over 30 energy technology companies involved in a wide range of activities.

We are now investing our second venture capital fund focused on emerging energy technologies, products and services, principally in the US. Target subsectors include:

- Distributed generation
- Renewables
- Energy management
- Energy storage
- Metering, billing and customer information
- Power quality, control and conditioning
- Power trading and risk management
- Emission technologies
- Software
- T&D monitoring and components

Type of Financing: Venture Capital

Sector Served: All types of Renewables

Geographic Focus: North America

Altira Group LLC

Organization: The Altira name is synonymous with seed and early stage venture capital for energy technology. Since 1997 we have been investing in companies that develop and commercialize energy technologies. Our definition of energy technology includes: oil and gas technologies, information technology for the energy industry, power generation, transmission and distribution technologies, and renewable energy.

The Altira mission is to invest in innovative technology companies that will impact the future of energy.

We are now investing Altira Technology Fund IV. If you are seeking venture financing for a technology enterprise in the energy industry, we would like to speak with you. We will consider opportunities throughout North America and beyond, as appropriate. We do not invest in projects for petroleum exploration and production or for power generation.

Baker & McKenzie LLP

Organization:	<p>Baker & McKenzie is one of the world's leading international law firms. With a network of more than 3,200 lawyers in 68 locations across 38 countries, we have the knowledge, experience and resources to deliver the broad scope of legal services required to respond effectively to our clients' international and local needs.</p> <p>We are widely recognized as a pre-eminent provider of legal services. For example, in 2003, we were named "International Law Firm of the Year" by Global Counsel Law Review, a ranking based on comments by the world's leading 5000 companies. Also in 2003, for the fourth consecutive year, we were selected as one of the top ten corporate law firms in America, according to a survey of more than 2000 directors of publicly traded companies taken by Corporate Board Member magazine. In addition, we received more nominations than any other firm worldwide for project finance expertise in the 2003 edition of Euromoney's Expert Guide to the World's Leading Project Finance Lawyers.</p> <p>Lawyers in our Global Renewable Energy Practice represent clients pursuing all aspects of the development and financing of renewable energy projects. Our experience includes hydro, wind, geothermal, tidal, solar, biomass, landfill gas and ethanol projects, both in North America and around the world. We also have extensive experience in the sale and purchase of projects and associated tax benefits, in export credit agency and multilateral financings, in capital markets financings of portfolios of projects and in emissions credit trading and monetization transactions. We would be pleased to discuss your requirements with you at any time.</p>

CEI Community Ventures

Organization: CCVI was formed to provide equity and operational assistance to qualifying businesses in northern New England. Our mission is to realize a 'triple bottom line' by supporting companies that can demonstrate an ability to meet or exceed our financial, social and environmental aims within our target region. CCVI invests from its own fund in amounts ranging from \$100,000 and \$500,000. Working with partner funds, we can also help coordinate and/or lead larger financings (as much as \$5 million) with investors that share our outlook and criteria.

CCVI is a for-profit subsidiary of Coastal Enterprises Inc. (CEI), a non-profit community and economic development group based in Maine. CEI helped to create legislation that led to the development of a US Small Business Association program known as the New Markets Venture Capital (NMVC) initiative. Part of SBA's long-standing Small Business Investment Company (SBIC) program, NMVC funds are co-funded by SBA and are to be invested in targeted, underserved communities across the US. A \$10M venture capital fund, CCVI was one of only seven organizations to receive conditional approval and the third to receive an SBA license to operate this program. In conjunction with its equity sponsorship, SBA also co-funds a \$3M Operational Assistance Program designed to support professional services that aid companies in either becoming 'equity ready' or executing their business plan once CCVI has provided venture capital funding. Like the equity program, these OAP resources must be directed to CCVI's target communities.

Clean Energy Group

Organization: Clean Energy Group (CEG) is a nonprofit organization established in January 1998 to increase the use of cleaner energy technologies in the U.S. and abroad through creative financing, business partnerships, public policy and advocacy. CEG works with nonprofit officials from around the U.S. that are responsible for over \$3.5 billion in new clean energy funds. CEG now manages the Clean Energy States Alliance (www.cleanenergystates.org), a new nonprofit organization assisting these funds in multi-state strategies. It also manages the Public Fuel Cell Alliance (PFCA), a new consortium of public fuel cell funders working to collaborate on fuel cell and hydrogen technologies. CEG also works with public officials in Europe interested in trans-Atlantic efforts to build clean energy markets. CEG and its related work through CESA is supported by the state funds, and by major foundations including Oak Foundation, Surdna Foundation, The Emily Hall Tremain Foundation, Rockefeller Brothers Fund and The John Merck Fund.

Clean Energy States Alliance

Organization:	<p>The Clean Energy States Alliance, or CESA, is a multi-state coalition of seventeen clean energy funds from twelve states working together to develop and promote clean energy technologies and to create and expand the markets for these technologies.</p> <p>Each member has its own definition of eligible technologies that controls their individual activities, but for purposes of CESA, “clean energy” is defined to include energy production from solar, wind, hydro, biomass, ocean thermal, tidal and wave, fuel cells, and related energy storage and conversion technologies. The state clean energy funds have come to recognize the benefits of joint action that both advance their individual missions and leverage significant economic advantages through collaboration. A website for CESA outlining these activities can be found at www.cleanenergystates.org. CESA is exclusively an alliance of state, and other nonprofit or public benefit, charitable organizations working form environmental improvement through clean energy activities, including public education.</p>

Cleantech Venture Network

Organization:	Cleantech Venture Network is a market facilitation service supported by private investors. We believe “clean technologies” – from solar energy to water purification - are the next wave of venture investing. We introduce promising young companies to investors and investors to quality deal-flow. We are developing a community of money managers, business executives, professional advisors, and other stakeholders active in the cleantech venture arena. Our services include venture forums, Venture Monitors and online services to investors and companies.

Ecologic Leasing Solutions

Organization:	<p>We are an equipment finance outsourcing company serving equipment vendors and service providers. We are not a leasing company nor are we a broker - we work exclusively for our clients, who are vendors of products or services. We function as the internal leasing department with a focus on helping grow sales - enabling vendors to take control of the financing terms of their sales. We offer financing solutions for renewable energy and distributed generation applications and are currently involved with a variety of players throughout this ecosystem: ESCOs, Genset manufacturers, fuel cell companies, developers, and end-users (off-takers who are either corporations or power companies).</p> <p>We have developed an innovative technique of financing the capital costs embedded in a service agreement using the customer's credit – not the service providers. Ask us about the Service Agreement Financing Program. We also provide traditional operating and capital leasing programs for small, medium, and large ticket transactions.</p> <p>We bring the capabilities and sophistication of a leasing company to vendors, enabling them to break the grip of monopolistic and predatory leasing organizations and drive down the cost of capital through competition. For example, we work with over 200 funders around the world - using the power of competition to reduce the cost of capital and to maximize the number of deals in our clients pipeline that get funded. We do have a track record of completing complex transactions involving poor credits. We also provide a fully-automated transaction processing solution via the web enabling vendors to turn credit applications to cash quickly and easily, while tracking all of the documents and details for audit purposes.</p>
Type of Financing:	Project Finance/Debt
Sector Served:	All types of Renewables

EnerTech Capital Partners

Organization: EnerTech Capital Partners invests in private, high growth companies focused primarily on energy technologies including renewable energy resources, emissions controls, distributed generation, energy demand response, grid reliability and efficiency and other clean technologies. EnerTech focuses on early to expansion stage companies but also considers seed and later stage opportunities. Central to our investment decisions are proven management teams with proprietary, defensible technologies offering a compelling value proposition to markets the EnerTech team knows well. EnerTech does not invest in commodities, power plants or other operating energy infrastructure assets.

Founded in 1996, EnerTech manages capital commitments of nearly \$300 million and is now planning its third fund focused on the energy and clean technology sectors.

Evolution Markets LLC

Organization: Evolution Markets LLC provides assistance to renewable energy project developers seeking to market their green attributes and works closely with utilities, large corporations, local governments, and other institutions to execute green power procurement strategies.

Evolution Markets is the highest volume broker in the domestic compliance markets for renewable energy certificates in Texas, PJM, and NEPOOL. The company has become the leading OTC brokerage of green tags by promoting new markets, educating and engaging new market participants, and fostering price transparency. We have brokered more volume in these markets than any other firm, including the first transactions of Connecticut and Texas RECs.

Evolution Markets has also revolutionized the brokerage of green tags in the national voluntary market for tradable renewable certificates (TRCs). Evolution Markets was the first to bring full price discovery to the market with the creation of a Web-based bulletin board that posts bids and offers from buyers and sellers of voluntary TRCs and the distribution of free monthly price reports. The company has lowered costs to buyers and promoted efficiency in the marketplace through its groundbreaking relationship with the Green-e certification program.

Global Environment Fund

Organization: Global Environment Fund (GEF) is an international private equity firm established in 1989 to invest in, and provide management support to, companies that make positive contributions to environmental quality, human health and the sustainable management of natural resources. Through its private equity investment funds, individually managed accounts and principal investment activities, GEF has completed more than 30 private equity or early stage investments in businesses operating in a broad array of economic sectors and in all major geographical regions of the world. Today, the firm's private equity portfolio includes controlling or major interests in fast-growing, entrepreneurial companies whose aggregate sales are in excess of \$2 billion.

GEF is currently managing a group of private equity investment funds, including: two funds dedicated to basic environmental infrastructure in emerging markets, a fund investing in companies that promote improved healthcare delivery in Latin America, and a U.S. fund focusing on technologies that promote improved efficiency in industrial processes, energy generation and telecommunications fields. In addition, through its own capital investment vehicle, Global Environment Capital Company, LLC, GEF develops, finances and takes controlling interests in principal investments for its own account. The capital available for investment through GEF's equity investment programs exceeds \$300 million.

Sectors of interest to GEF include, among others, renewable energy, clean energy and clean technology.

Illinois Clean Energy Community Foundation

Organization: The Illinois Clean Energy Community Foundation was created in 1999 to improve energy efficiency, advance the development of renewable energy resources and protect natural areas and wildlife habitats throughout Illinois. Funds are distributed through grants to 501(c)(3) nonprofit organizations and local or state government entities. Through May 2004, Illinois Clean Energy has awarded 924 grants totaling \$54.5 million to support projects in 88 of Illinois' 102 counties.

Illinois Clean Energy's largest programs are targeted at improving the energy efficiency of public facilities throughout the state, including K-12 schools, libraries, park buildings, child care centers, and college teaching and research buildings. Those programs support installation of energy efficient lighting, 'green' design and commissioning of new and remodeled buildings, and use of high-efficiency equipment, such as geothermal HVAC systems.

Approximately 20% of the Illinois Clean Energy's grant funding supports renewable energy projects, including community wind projects, solar PV & solar thermal systems, and biomass energy projects. Support for utility-scale wind projects is provided by the Illinois Finance Authority through its Renewable Energy Development Fund, which was capitalized by a grant from Illinois Clean Energy.

Type of Financing: Private Foundations

Illinois Finance Authority

Organization: The Illinois Finance Authority (IFA) supports renewable energy development in Illinois through its Renewable Energy Development Fund (RED Fund). The first financial product IFA offers through the RED Fund is a Wind Farm Debt Service Reserve Guarantee.

Through the Wind Farm Debt Service Reserve Guarantee, IFA may provide long-term, no- or low-interest loans or guarantees to cover up to half of the debt service reserve required by a wind power generation project's primary lender(s). The amount of the loan or guarantee is up to \$60,000 per megawatt of nameplate generating capacity and is capped at \$3 million for any one project.

Origin of funding: The RED Fund was capitalized by a \$6 million grant from the Illinois Clean Energy Community Foundation.

Type of Financing: Project Finance/Debt, State/Provincial

Mainstay Energy

Organization: Mainstay Energy is the nation's premier provider for innovative financing solutions of small and medium scale renewable energy projects. Mainstay's first program, Mainstay Energy Rewards, has been a huge success. By aggregating green tags from small scale renewables, Mainstay has created an instant win-win: extra financing for residential, community, and small commercial projects, and appealing green tag products for green power marketers and retailers.

Mainstay Energy continues to create and define its industry by innovating new products for financing, launching the RePower program in March of 2004. RePower is a comprehensive financing solution, allowing clients to enjoy the benefits of onsite renewable energy without the high up-front costs.

Mainstay Energy provides a high level of customer service along with a sophisticated back-office and IT infrastructure to ensure total satisfaction for its clients. The company prides itself on strong partnerships in the industry, including green power marketers, renewable energy installers, dealers, manufacturers, as well as advocacy and education groups.

Mainstay Energy is headquartered in downtown Chicago.

Native Energy, LLC

Organization: NativeEnergy is a national marketer of renewable energy credits or “green tags,” offering individuals, businesses and organizations a means to compensate for their global warming pollution, or to effectively power their homes and businesses with renewable energy. NativeEnergy’s patent-pending business process brings upfront payment to renewable projects for their future green tag output, enabling its customers to help finance the construction of new wind farms and other renewable energy projects that directly reduce our reliance on fossil fuels to meet the nation’s electricity needs.

Natsource LLC

Organization:	<p>Natsource LLC's Environmental Brokerage and Strategic Services Units offer unique financial and advisory services to assist renewable energy project developers and owners with capital mobilization and green asset management. We maximize clients' value and revenue-generating opportunities through our distinctive ability to offer advisory services and execute a successful marketing strategy for project outputs. The company dedicates particular attention to assisting project developers in structuring and securing long term purchase agreements (PPAs) for their renewable energy output. Through our global brokerage operations and policy expertise, Natsource provides unparalleled custom services to clients.</p> <p>Natsource works with clients to secure and enhance project financing through the structuring innovative forward contracts for power and renewable energy certificates. In particular, Natsource's presence in the liquid power and environmental commodity markets enables us to create bid interest for the project output. Our approach expands upon the usual single source PPA negotiation to identify alternative sales options where projects are not automatically obligated to sell to the incumbent utility.</p> <p>Natsource is the leading broker in regulated and voluntary markets for renewable energy attributes throughout the United States, Canada, UK, EU and beyond. We work with our clients to develop strategies tailored to meet individual circumstances of their projects, including technology type, market region, and operating characteristics.</p>

NJ BPU Office of Clean Energy

Organization:	<p>The New Jersey Clean Energy Program offers support to help encourage the installation of renewable, clean energy generation systems. To assist in startup, the program even includes financial incentives to owners who install qualifying clean energy generation systems on site for their New Jersey homes or businesses. These systems enable the owners to produce their own electricity – while at the same time helping protect the environment and reducing strain on the grid (existing electric transmission and distribution systems). The program supports a variety of renewable technologies, such as fuel cells, photovoltaics (solar electricity), small wind, and sustainable biomass equipment installations. The Renewable Energy Economic Development (REED) Program provides funding for renewable energy businesses in New Jersey. The New Jersey Clean Energy Program is working with the New Jersey Economic Development Authority in providing venture capital to businesses. The BPU will pre-qualify the applicants in terms of their renewable energy involvement and the EDA will assess the quality of the business plan. The funding will be given out to qualified applicants as recoverable grants of up to \$500,000 per business. The companies will be required to pay back the money as their business venture begins to generate revenues. The concept is to provide seed capital for new businesses or business ventures and then to transition the business into traditional capital markets.</p>

NJTC Venture Fund

Organization: The NJTC Venture Fund provides financing to promising start-ups and early-stage companies located in the New Jersey region. The initial investment ranges from \$1 - 2 million. Over the course of the portfolio company partnership, NJTC Venture Fund expects to invest \$3 - 4 million. At the time of investment, companies may be seed stage or have as much as \$5 million in annual revenue.

NJTC Venture Fund provides responsive capital and an unparalleled active local network of partners through our affiliation with the leading business networking organization in New Jersey, The New Jersey Technology Council . The New Jersey Technology Council and its 1200 corporate members make up the 'NJ Network.' A number of prominent members of the NJ Network are also investors in the NJTC Venture Fund and actively support NJTC portfolio companies. This is why our motto is 'Networked Capital.'

Oregon Department of Energy Small Scale Loan Program

Organization:	<p>SMALL SCALE ENERGY LOAN PROGRAM</p> <p>The 1979 Oregon Legislature created the Small Scale Energy Loan Program (SELP). In 1980, voters approved an amendment to the Oregon Constitution authorizing sale of general obligation bonds to finance small scale, local energy projects. SELP promotes energy conservation and renewable energy resource development in Oregon. Renewable resources include solar, geothermal, biomass, hydro, wind, and waste heat. SELP also can fund projects that use alternative fuels, save transportation energy, make products from recycled material, or increase the production or efficiency or extend the operating life of a project.</p> <p>The program often makes loans that conventional lenders cannot. In some cases, conventional lenders lack the technical expertise to evaluate a project. In other cases, SELP's tax-exempt rates or its long-term, fixed-rate loans make a project economically viable. The program is self-supporting. Bond sales provide loan funds and borrowers pay program costs. The staff of ten includes lenders, accountants, and an engineer. Loan size can range from \$10,000 for residential projects to several hundred thousand dollars for schools, to millions of dollars for industrial and energy-generation projects. Loan security may be a first or second mortgage on project land, buildings, and equipment. Loan applications for more than \$100,000 receive a review from the seven-member SELP advisory committee, whose volunteers are made up of Oregonians in the financial and energy community.</p>

Pennsylvania Department of Environmental Protection, Office of Energy & Technology Development

Organization: DEP's Office of Energy & Technology Development serves as the energy office for the Commonwealth of Pennsylvania. The office offers a variety of programs for financing clean, advanced energy projects in Pennsylvania. The office also houses the Pennsylvania Energy Development Authority, an independent financing authority that can issue tax-free bond financing as well as grants and loans for clean, indigenous energy projects. The office works with its sister agency, the Department of Community and Economic Development, to recruit energy projects and energy companies to Pennsylvania.

In addition, the office develops energy policy for the Commonwealth and evaluates new energy and environmental technologies. The office also houses the Small Business Office, which offers financing and compliance assistance services to Pennsylvania small businesses.

Saw Mill Capital

Organization:	Saw Mill Capital is a private equity firm focusing on buyouts and growth equity investments focused in the Energy Industry. We look for investment opportunities where we can leverage our Energy Industry knowledge and experience to successfully finance and consummate transactions, partner with exceptional management teams and contribute to the future success of the company. Our objective is to realize superior long-term capital appreciation by partnering with the management of middle-market manufacturing, technology and service companies. Saw Mill Capital is actively looking for companies with a minimum of \$5 million in cash flow and compelling organic or external growth opportunities. We frequently meet with companies with less than \$5 million in cash flow as acquisitions opportunities for our portfolio companies.
Type of Financing:	Public Equity Funds/Asset Management

Self-Help Credit Union

Organization:	For over 20 years Self-Help has been serving its mission of creating ownership and economic opportunity for minorities, women, rural residents, and low-wealth families. We help provide financing for low-wealth homebuyers, childcare facilities and other small businesses, non-profits, and enterprises that have a positive environmental impact. There are two primary components of our organization, one is our lending program and the second is deposits. When you make a deposit with Self-Help we are able to provide more loans to low-wealth individuals, nonprofits, rural residents and families. Investing your money in a market rate and federally insured Self-Help CD and or money market account is a great way for you to help support the environment.

Travelers Financial Corporation

Organization:	<p>Project Financing</p> <p>Travelers Financial Group is active in structured project financing for the energy sector, with particular interest in 'green' and alternative energy projects backed by long term power purchase agreements. Small hydro, biomass, wind, wave and community energy projects offer significant potential for contributing to Canada's future energy needs using under-utilized energy resources. Our primary focus includes:</p> <p>Long Term Takeout Financing – designed to pay out third party construction lenders at project completion; typically Travelers provides an option to fix the interest rates for the full amortization period of the project – up to 20 years.</p> <p>Construction Financing – short-term financing with progressive drawdowns according to construction expenditures; typically Travelers provides floating rate financing during the construction phase.</p> <p>Construction and Takeout Financing may be offered in a combined facility, that offers the advantages of 'one-stop' financing, with the option to lock-in a long term rate at the commencement of the construction phase.</p> <p>Travelers is also interested in securing financing mandates for the following requirements:</p> <p>Subordinated Debt Financing – to source short term and / or long term financing, structured with financing terms that meet the equity requirements of construction and / or takeout lenders.</p> <p>Equity Financing – to source share capital investments from institutional and private equity investors.</p>

Triton Venture Partners, LP

Organization:

Triton Ventures is an Austin, Texas-based venture capital fund specializing in high technology spin-off companies and other promising startups. Periodically, the business world experiences a 'sea change': a fundamental shift in how things get done. At Triton Ventures we actively seek out opportunities to benefit from these changes. However, we recognize that opportunity is only part of the picture. Successful companies require the right team of people and the capital to execute. Opportunity, people and capital - Triton Ventures helps companies with all three.

Triton was established with the belief that significant opportunities exist to transfer technology from corporate or institutional development environments into new entrepreneurial companies focused on rapid growth. For that reason we are especially interested in spin-out opportunities. In fact, most of our investment activity has been with this kind of company.

In deciding which companies to fund among the hundreds we encounter, we tend to focus on three key considerations:

1. Will the company's technology-based product or service significantly change the way business is conducted?
2. Is there a large and/or rapidly growing market, manageable competition and moderate capital requirements?
3. Is there a "positively charged" management team with experience and enthusiasm that we will feel good about working with even when things do not go according to plan?

If the answer to all three questions is yes, we will definitely have an interest.

U.S. Global, LLC

Organization:	<p>U.S. Global, LLC (“USG”) is a South Florida investment and development firm that funds companies and develops projects in the energy, technology, manufacturing and retail industries. The principals of USG have extensive financial structuring and placement experience with the major Wall Street firms, including: Goldman Sachs, Credit Suisse First Boston, Jefferies and NatWest. Building on this experience, USG specializes in re-structuring enterprises, establishing creditworthiness, expanding businesses and unlocking inherent value.</p> <p>USG has strong strategic relationships within numerous industries upon which it draws to provide partnership opportunities, contractual relationships and additional financial resources for its projects. As a result, USG is able to invest in companies and develop projects with a wide range of capital requirements.</p> <p>U.S. Global currently has a two-tiered investment strategy:</p> <ul style="list-style-type: none">· USG’s venture capital activity focuses on taking small positions in relatively high-risk companies. Our venture capital investments range from software companies to energy storage.· USG’s private equity activity is geared towards taking majority positions in operating companies with significant sales and/or assets. Private equity investments under consideration range from service stations to energy projects.
